TEXTURE ROLLERS

Designed to imprint decorative patterns into freshly applied texture materials, creating unique finishes on walls, ceilings, and other surfaces. Ideal for both new construction and renovation projects, these versatile rollers can be used to enhance entire surfaces, add texture to accent areas, or help conceal existing imperfections. A variety of texture materials can be used to achieve different patterns and finishes.

COMMON APPLICATIONS

- **Concealing Imperfections:** Use with heavy texture material to create patterns that help hide flaws and uneven areas on older walls and ceilings.
- **Decorative Finishes:** Use with thin texture material to add distinctive patterns to entire surfaces or highlight accent areas.
- **Concrete Block Surfaces:** Roll over freshly applied block filler to create decorative patterns on concrete block surfaces.
- **Custom Surface Designs:** Provides a versatile way to create unique textures and consistent patterns across a variety of interior surfaces.

APPLICATION INSTRUCTIONS

Apply an even layer of texture material to the surface using a roller or spray gun. Once the material reaches the proper working consistency, roll the Texture Roller over the surface to imprint the desired pattern. Maintaining a uniform thickness of texture material helps ensure consistent pattern depth and appearance.

Before starting, test the application on a sample surface to determine the ideal material consistency and timing for pattern rolling. The amount of time between applying the texture and using the roller may vary depending on the material, temperature, humidity, and other environmental conditions.
